Sustainability Community Culture: Education Outreach SpecialistThe URI Office of Sustainability has developed a spring semester opportunity for a student to collect information about campus built projects and their contribution to campus sustainability, and create outreach/marketing materials communicating this information. This student work will lead to his/her design and development of interpretive signage for the campus community.

Sustainability Communications: Marketing and Public Relations SpecialistEqually important as developing campus initiatives that promote sustainability as a lifestyle, is effectively communicating the benefits of these initiatives. URI programs related to sustainability often run for months, even years, without much awareness or acknowledgement by the larger university community. To guide the campus community toward adopting sustainability as a lifestyle, the students, staff, faculty and even the local community must be inspired to actually change their behavior. This Sustainability Fellow would be responsible for creating a public relations or communications & marketing plan for the URI Office of Sustainability, as well as write press releases and articles that highlight recent and current sustainability projects.

Sustainability Curriculum/Research: Academic Initiatives Support Faculty, staff and students at URI conduct a considerable amount of research related to sustainability, and there are many sustainability related courses and co-curricular activities on campus. There is a considerable challenge in disseminating these activities across and beyond the campus. This Fellow will assist the President's Council on Sustainability's Curriculum/Research Working Group in the development of a web page summarizing sustainability related research on campus, and analysis of courses across departments and schools to assess their connections to sustainability issues. This intern will work with faculty to digest their research to short summaries to be posted on the web.

Transportation Sustainability: Program SpecialistMore than 30% of URI's greenhouse gasses are the result of transportation issues on campus. Too many students, staff and faculty are driving to campus alone and not enough are carpooling or using public transportation. This Fellow will assist with a Transportation Demand Management study to assess possible strategies for reducing the University's greenhouse gas emissions resulting from travel to and from campus.

Sustainability Community Culture: Green Events CoordinatorThe hundreds of meetings, conferences and events occurring monthly across campus contribute significantly to our greenhouse gas inventory. This intern will develop a green events guidebook and execute an implementation plan for a green events program at URI. The intern will serve as a green events consultant for university groups while also working with students to organize green events for Earth Day and other campus campaigns.

Operations Sustainability: Greenhouse Gas (GHG) Inventory and Program SpecialistBy signing the American College and University President's Climate Commitment (ACUPCC) the University has an obligation to make the campus' inventory of greenhouse gas emissions publicly available. Project work taken on by this Fellow will include updating the inventory as well as developing a reporting system or database to be used in all future GHG inventories.
